There is a global wave of investment

We have an opportunity in Australia

eResearch \$911M
Complex Biology \$216M
In addition to existing operating

FACILITIES FOR THE FUTURE UNDERPINNING AUSTRALIA'S RESEARCH AND INNOVATION

Government Response to the 2016 National Research Infrastructure Roadmap
Research Infrastructure Investment Plan

		2017–18 to 2021–22**	Total to 2028–29
Digital data & eResearch platforms	Funding will ensure a regular upgrade cycle for maintaining Australia's Tier 1 HPC capability, across both the Pawsey Supercomputing Centre (Pawsey) and the National Computational Infrastructure. In addition, a scoping study	219.0	911.1
Complex Biology	Investments enable upgrades to next generation sequencing, mass spectrometry, cryo-storage, phenotyping and virtual laboratories that will drive new medical treatments, reduced future medical costs and facilitate emerging opportunities in biomedicine, medical technology, agribusiness and environmental conservation.	53.4	216.2

Case Study

Bioplatforms Australia (BPA) enables world class research in the life sciences by investing in state-of-the-art infrastructure and associated expertise in the fields of genomics, proteomics, metabolomics and bioinformatics. For example, genomics is the study of genomes—the entirety of our DNA, and was a major focus of the 2030 Strategic Plan. It noted that genomics and precision medicine will play an increasing role in improving health outcomes. Through next generation gene sequencing, BPA is working to integrate genomic medicine into healthcare to create personalised, precision medicine. This aim is to shorten diagnosis time and enable early intervention.

Investments in BPA will also include state-of-the-art genomics infrastructure to support the world's largest coral genomics sequencing project, which will help researchers understand the genetic makeup of corals and how they might respond to climate change.

Who is Australia's Life Science Research Community?

Who is Australia's Life Science Research Community?

100,000

Total pool of Australian publicly funded researchers

Who is Australia's Life Science Research Community?

30,000

We estimate 30% are bioscience related

+200,000 students

Who is Australia's Life Science Research Community?

Important Transitions

Defining a BioCommons

National Consultation (2017)

Attendance of over 150 research leaders in Life Science

International Advisory Group

Vivien Bonazzi, Senior Advisor Data Science Tech & Innovation, BDZK Initiative (NIH)
Paul Flick, Lead, Vertebrate Genomics & ENSEMBL, EBI-EMBL
Jaap Heringa, Head, ELIXIR-NL
Jason Williams, Education, Outreach and Training Lead, CyVerse (NSF)
Rebecca Johnson, Director, Australian Museum Research Institute
Tony Papenfuss, Head, Computational Biology, WEHI VIC
Mark Walker, Director, Aust Infectious Disease Res Centre, UQ & ID
Delphine Fleury, Aus Centre for Plant Functional Genomics, SA
Sean Grimmond, Director, Centre for UoM Cancer Research, VIC

National Reference Group

Prof Jacqui Barlow (Plant Genetics & Breeding, UWA)
Prof Dave Burt (Director Genomics, UQ)
Prof Peter Cameron (Academic Director, The Alfred Emergency and Trauma Centre/Monash)
Prof Joanne Daly (CSIRO Honorary Fellow)
Prof Frank Cannon (Director, QIMR Berghofer)
Prof Rob Henry (Director, QAAFI, UQ)
Prof Ary Hoffmann (Biosciences, Melbourne U)
Prof Dean Jerry (Dep Director, JCU Centre for Tropical Fisheries and Aquaculture)
Prof Ryan Lister (Head, Epigenetics and Genomics, Harry Perkins INSTU WA)
Prof John Mattick (Director, Garvan Institute)
Prof Kathryn North (Director, MGR)
Prof Nick Packer (Macquarie U & Inst for Glycomics, Griffith U)
A/Prof Tony Papenfuss (President ABACBS, Computational biology WEHI & Peter Mac)
Dr Maurizio Rossetto (NSW Royal Bot Gardens)
Prof Eric Stone (Director, ANU-CSIRO Centre for Genomics, Metabolomics and Biomaterials, ANU)
Dr Jen Taylor (Group leader Bioinformatics, CSIRO)
Prof Steve Wesselingh (Director, SAHMRI)
Prof James Whistock (Monash, EMBL Australia)
Prof Marc Wilkins (Director, Ramaciotti Centre for Genomics, UNSW)
Prof Tony Bacic (Director, LaTrobe Institute of Agriculture and Food, LUT)

International Study Tour (2018)

1. ELIXIR Germany/EMBL (St. Pauli)
2. European Commission (Gilles Brandt, Brussels)
3. EMBL European Bioinformatics Institute (EMBL-EBI)
4. ELIXIR Canada Platform (Gilles Brandt, St. Pauli)
5. ELIXIR HK (Andrew Smith, Wellcome Genome Campus, Hinxton)
6. European Genomics Institute (Thomas Haeussler, EGI)
7. European Bioinformatics Institute
8. ELIXIR France (Philippe)
9. ELIXIR Belgium (Philippe)
10. ELIXIR Netherlands (Philippe)
11. ELIXIR Italy (Philippe)
12. ELIXIR Spain (Philippe)
13. ELIXIR Sweden (Philippe)
14. ELIXIR Switzerland (Philippe)
15. ELIXIR Taiwan (Philippe)
16. ELIXIR Thailand (Philippe)
17. ELIXIR United Kingdom (Philippe)
18. ELIXIR United States (Philippe)
19. ELIXIR Vietnam (Philippe)
20. ELIXIR Australia (Philippe)
21. ELIXIR India (Philippe)
22. ELIXIR China (Philippe)
23. ELIXIR Japan (Philippe)
24. ELIXIR South Korea (Philippe)
25. ELIXIR Singapore (Philippe)

Study trip: broad conclusions

Global scale compute and data infrastructures are increasingly underpinning global scale research in life sciences

- Cloud First is pervasive across EU and US
- In the US (but not EU) true partnerships arising with cloud providers
- The concept of Data Commons is very strong in the US, focused on data and method sharing
- ELIXIR is doing a very good job of coordinating data infrastructure across Europe
- ELIXIR/EBI compute strategy firmly cloud focussed - federated compute + data across EU
- Federated approaches to data infrastructure are developing, and accessible
- National Bioinformatics Infrastructures can deliver benefits across industry engagement
- Galaxy is extremely well regarded as a community analysis platform in both Europe and the USA

The Australian BioCommons - principles

- A national focus on capabilities and communities
- Partner internationally: participate in and contribute to larger critical mass efforts where possible; reuse and improve rather than build anew
- Build a software and expertise capability that will reduce duplication of infrastructure management in Australia and allow efforts to be re-focussed on methods development and dissemination
- Promote the development of, and build on, high throughput cloud infrastructure that is interoperable with international (initially US and European) equivalents, using established, well supported software platforms
- Streamline the exchange of tools, workflows, data and training and expertise both nationally and internationally

The Australian BioCommons

We are not establishing a bioinformatics service:

- We are aiming to reduce duplication of bioinformatics infrastructure management to allow researchers to focus on methods development and use (and away from systems administration tasks)
- We are committed to facilitating workforce upskilling through providing:
 - a national bioinformatics training program (aimed at both life-scientists and bioinformaticians)
 - integrated services to enable exchange of expertise around tools,. techniques etc run across a variety of infrastructures and services

Five technical activities/**implementation studies**
managed as deliverables of the Pathfinder Project

Human Genome
Access and Archive

Interoperability with global data
(Kids First)

Non-model Genome
Assembly & Annotation

Highly accessible Tools and
Workflows
(phylogenetics, instruments,
CloudStor)

BioCloud - on-prem and commercial cloud
Accessible compute and storage

Five technical activities/**implementation studies**

Human Genome
Access and Archive

Interoperability with global data
(Kids First)

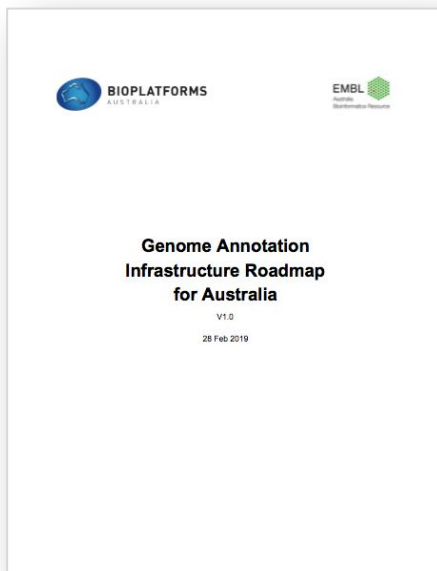

Non-model Genome
Assembly & Annotation

Highly accessible Tools and
Workflows
(phylogenetics, instruments,
CloudStor)

BioCloud - on-prem and commercial cloud
Accessible compute and storage

Systems for de novo genome assembly and annotation

- **Communities and infrastructure services identified for common omic-based challenges:** e.g. Genome annotation; Multi-omics integration; Comparative Genomics; etc
- **Development of a Genome Annotation Infrastructure Roadmap for Australia**
 - First iteration released for community comment last week
 - <http://bit.ly/aus-genome-annotation> – **COMMENTS WELCOME!**
 - Subsequent iterations following consultation with:
 - International entities operating genome annotation infrastructure elsewhere (e.g. Ensembl, EBI)
 - Australian Infrastructure Providers (e.g. NCI, Pawsey, ARDC)
 - Final community agreed roadmap planned for November 2019, to inform future BioCommons investment

Important Transitions

Workforce Transition

Upskilling in Bioinformatics

How to gain bioinformatics skills consistently ranks as a primary concern of life science researchers

How to use tools and infrastructure is required by bioinformaticians.

Bioinformatics training across Australia is highly localised and variable

BioCommons Training 2019

With national experts, the development of new training material (in 2019: Snakemake and Nextflow, Phylogenetics Trees for Beginners).

Development of a network of highly motivated trainers

Facilitating national training events at scale ('hybrid model')

Developing an ambitious National Plan for Bioinformatics Training

Outcome: An inclusive and scalable approach to bioinformatics training that complements local efforts

Project Partners and Core Team
